

6 reasons to choose KKP - Kubermatic Kubernetes Platform

Full-scale cloud migration is rare. KKP allows for a hybrid approach to IT modernization with an integrated Kubernetes platform that comes ready to build and manage applications. You can gain efficiencies quickly without having to create a system from scratch.

1 Integrate existing infrastructure with cloud-native apps

Your customers rely on the consistent delivery of the current services you provide, while the market demands continual innovation. Move existing workloads and expensive legacy applications to the cloud where you can expect future return on investment in a cloud-native environment.

2 Manage both containers and virtual machines

Many organizations are moving from virtualized infrastructure to containers. To facilitate this transition, Kubermatic Kubernetes Platform can orchestrate and manage across both containers and virtual machines. Look to automation to increase ROI for your business.

3 Deploy and manage workloads anywhere at any scale

With a reliable cloud infrastructure in place, business transformation is all about apps. KKP lets you work across every environment - from public, private, or hybrid clouds, to data-center and edge locations. KKP enables you to operate consistently across environments.

4 Optimize resources with one tech stack

When you adopt a container platform with Kubernetes at the core, you can complete it by hardening it for enterprise use and adding additional tools to provision, manage, and scale your systems. Avoid commercial distributions of Kubernetes that include open source components but then lock you into a proprietary platform.

5 Use tools to allow for standardized workflows

Artificial intelligence (AI), machine learning (ML), edge computing, and the Internet of Things (IoT) will push organizations into yet another level of competitiveness. The right application development platform will provide a consistent work environment and act as a foundation for innovation.

6 Benefit from a tested and certified platform

KKP provides the tools you need to operate successfully in a hybrid-cloud environment. Build with Kubermatic using trusted cloud providers and software on a platform that connects to an integrated ecosystem of complementary cloud-native tools.

About SVA Software, Inc.

SVA Software is a leading provider of enterprise software solutions that deliver reliable and high-performing products from mainframe optimization solutions to VMware license assessments, and more. We help you monitor, optimize, and report on your business-critical infrastructure giving you the visibility you need to take decisive action. As a strategic partner to systems integrators, vendors, and customers, SVA Software can help organizations prepare for the digital future.
