

The Enterprise Lifecycle-Management-Tool

Automate your **deployment** and **configuration management**

Automate your **life-cycle** and **patch management**

Standardize your data center and manage your infrastructure in the **cloud** or **on-premise** through a **unified interface**

orcharhino Features

Management

Manage hundreds or even thousands of systems with one interface as if it were just one system.

Deployment

Create new systems with a mouse click or an API call as a virtual machine, on bare metal servers, or in the cloud.

Configuration

Automate the configuration of your managed hosts. You can roll out changes, analyze deviations, and fix them with just a mouse click.

Software Release

Manage software in multiple levels from Dev to Prod. Automate security fixes and updates using errata.

Reporting

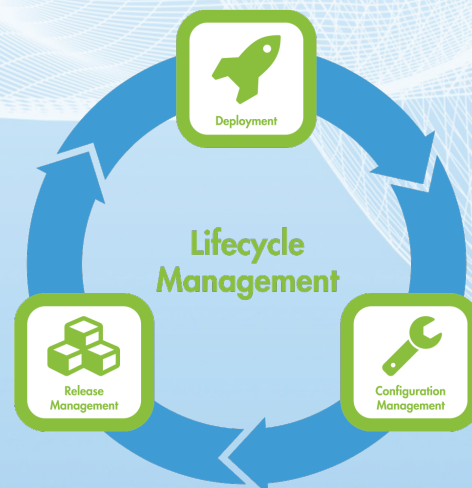

Keep track of current patch levels as well as system security and track changes.

How orcharhino works

Deployment - Roll out and configure new hosts, both physical and virtual, in a continuous process.

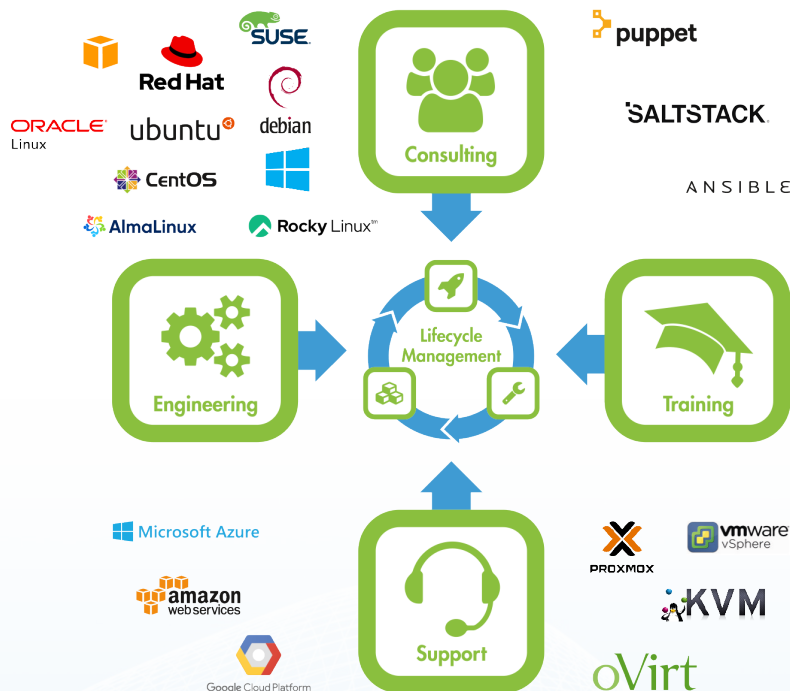

Configuration Management - Manage all configurations in your data center, from the operating system to databases and applications.

Release Management - Version controlling & provisioning of software packages: Install updates and patches on managed hosts.

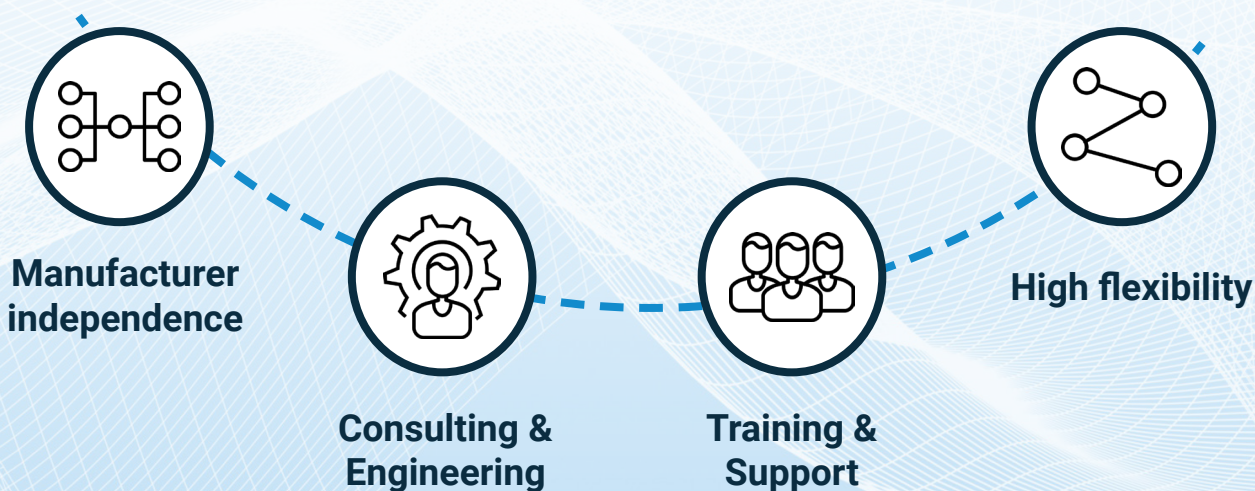

orcharhino Advantages

- ✓ Reduced administration costs
- ✓ Error prevention through automation
- ✓ Simple and clear system settings
- ✓ Significantly faster development of new solutions (time to market)
- ✓ More system stability and security

Why orcharhino ?

Is it time to **simplify your datacenter?**

orcharhino is the solution for data center orchestration - Automate your deployment and configuration management as well as your lifecycle and patch management. Manage everything from one integrated interface. Simplify your datacenter with orcharhino now:
